#### WEBPAGE 1

What is our goal and objectives?

- This website raises public awareness about the state of our ecosystem and environment.
- For raising public awareness about the need for environmental protection.
- For us ensure that all applicable environmental regulations are met.
- For students to learn about various environmental protection strategies and methods.
- For students to have a better understanding of their surroundings
- Students will be able to understand how our environment or planet operates as a result of our environmental facts.
- For students to make environmental efforts that focus on ecosystem recovery, biodiversity conservation, the natural and cultural environment, human health, efficient material cycles free of hazardous chemicals, sustainable natural resource use, efficient energy usage, and consumption habits.
- For students to find learning about the environment enjoyable and interesting.

#### Environmental Facts

1. Every day, around 27,000 trees are sacrificed solely to make toilet paper.
2. Every minute, 100 acres of rainforest are bulldozed.
3. Beef is one of the most major contributor to deforestation.
4. Only 1% of all available water is often used by humans.
5. 7.5 million tons of oil are dumped in the seas.
6. 8.78% of marine animals are at risk of choking due to plastic.

7. Every year, plastic kills over a million marine creatures.
8. Burps and farts from cows are bad for the environment.
9. CO<sub>2</sub> is a greenhouse gas that contributes to global warming.
10. The amount of wood and paper thrown out each year could heat 50 million houses.
11. The age of the planet is estimated to be around 4.5 billion years.
12. Fungi are extremely important in the ecosystem.
13. Ants weigh more than humans
14. You've drunk the same water as a dinosaur
15. The amount of water on Earth is constant, and it is recycled constantly. There's a good possibility that some of the water you drink has gone through the intestines of a dinosaur.
16. Between 1970 and 2015, human use of Earth's natural resources more than quadrupled. From 2015 to 2050, our usage of natural resources is anticipated to increase by more than double.
17. If the present pace of devastation continues, the world's rainforests will be gone by 2100, according to NASA.
18. NASA estimates that if present deforestation rates continue, the world's rainforests will be gone by the year 2100.
19. The world population is 215,000 people larger today than it was yesterday.
20. If all life on Earth were weighed, the human population would barely account for a tenth of that amount.
21. By 2100, the world's metropolitan population will generate three times as much trash as it does now.
22. 27,000 trees are cut down each day so we can have Toilet Paper.
23. Aluminum is a material that may be recycled indefinitely. One pound of aluminum recycled can save enough energy to power our televisions for at least three hours. Humans consume 80 trillion aluminum cans each year.
24. Every year, 1 million aquatic animals are killed when plastic bags and other plastic items are thrown into the ocean.
25. It will take more than 4,000 years for a glass bottle produced in our time to disintegrate.

26. Only 1% of the world's water resource can be utilized. For the time being, 97 percent of the Arctic is ocean water and 2% is frozen solid.
27. Every year, 77 million individuals are added to our planet's population.
28. Every year, an estimated 50,000 species that once thrived in our tropical forests die extinct. That's 137 species every day on average.
29. The oldest trees on the planet are over 4,600 years old.
30. Packaging materials account for 35% of the waste in landfills.

## ENVIRONMENTAL INFORMATION

### **Why do we need to take care of our environment?**

Our current circumstance is for sure significant for us people to endure and remain alive. This is the place where we get our everyday necessities and assets which makes it truly indispensable for us people. As the years progressed, a ton of things have changed. There were different developments and various machines were imagined too. Our population developed and as it occurs, a lot of trash was dissipated in our environmental factors. Pollution emerged too, which brought about the annihilation of our planet. On the off chance that we don't take great consideration of our planet at some point or another, we may totally lose the spot we're living in in the present moment. That is the reason, as people, we are endowed to take great minds and treasure our current circumstances just as the various resources we have. With that, we should begin to consider ways on the most proficient method to ensure our current circumstance. First, our current circumstance is the thing that housing and assists our biological system to develop and flourish. Without ensuring and dealing with our current circumstances we're putting such countless lives in danger like creatures, plants, and crops, and surprisingly our own. The entirety of the biological systems that make up our current circumstances is profoundly associated. One change to an environment could totally change everything that has been made. Second, one of the significant reasons why we need to pursue protecting the climate is on the grounds that it assists with ensuring humankind. On the off chance that we didn't have our current circumstance, we wouldn't have a spot to live or assets to live off of. At the present time our air, food, and

even water are being contaminated due to various elements. Third, another tremendous factor that is in danger on the off chance that we don't ensure our current circumstance is the surrounding woods that we use to endure. Fourth, when you're first contemplating reasons why you ought to ensure the planet, you should realize that it is your ethical constraint to do as such. As a human on earth, it is your obligation to ensure that it is secured. Finally, when you work to ensure the planet, then, at that point you're effectively rewarding your generation. All things considered, your generation is the person who is as of now utilizing it and living in it. You can likewise assist with rewarding the group of people yet to come. Give them a planet and surroundings that aren't harmed and show them how to keep living economically. Our current circumstance is the main spot we need to live and we should need to treat it with care and regard. In the event that we don't take great consideration of it at some point or another, our planet Earth's condition will deteriorate until later on, we people will have no planet to live on.

### **Human actions that seriously harm our Environment. What are its effects?**

We, people, make use of our environment and our sources for survival. We get special assets like wood, water, etc. To meet our wishes so as for us to survive on this planet. With that, we make various movements that influence our surroundings. One of our dreams as people should be to go away the earth in a better situation than we observed it. That consists of doing as plenty as we will reduce our footprint. There is little conduct we mindlessly exercise every day without even realizing the terrible effect they're having on our planet. Some of the everyday duties which could doubtlessly damage our environment are first, the immoderate use of plastics. We use plastics almost every day, beginning from the packaging of the food we consume. Most items

available in grocery stores and fast meals chains are packaged in paper or plastic, not to say the baggage used to carry them home. With that, the plastic that takes loads of years to decompose affects no longer the simplest of our environment but additionally the alternative species right here on this planet that intakes plastics which can be thrown everywhere. Plastic cannot be absorbed by the surroundings and a big quantity winds up inside the ocean which is a scenario that is dangerous to water organisms, wildlife, and humans. Next, quite a few of us are guilty of this however leaving the lights on is bad for our surroundings and wastes a lot of energy too. Using much less energy reduces the variety of poisonous fumes emitted by electricity. That's due to the fact maximum plants burn coal, fossil gasoline, or crude oil to generate power. So turning out the lighting will keep your power invoice and the surroundings. Lastly, the flushing of the restroom may be a waste too. The motive at the back of this is that the Environmental Protection Agency (EPA) found out that bathrooms made before 1980 on common use five gallons of water according to flush. And bathrooms, in trendy, use 30% extra water than anything else in our houses. If not necessarily needed, we suggest using bathroom paper as an opportunity and most effectively use the flush inside the bathroom when wished. There is nevertheless a lot of human conduct and activities that don't appear harmful but it actually is. Most of the time, we sincerely don't observe these and some of us aren't even conscious about it.

Here in Greenology, we inspire students in addition to other humans, to try their best and spread factual awareness and information to everyone. A lot of options can be used that could lessen the impact of our movements on our surroundings. Together, let us build a secure place to live in and be more careful of our actions. We must constantly remember the fact that everything that we do has consequences and can severely affect us and future generations as well.

## NOTES !! :

- if puro plain blue lang po yung sunod sunod na page sa sample design (yung naka pdf) then sa dulo is yung may mga iba't-ibang elements sa baba, it means isang page lang po yun.

Example:

It means isang buong webpage na po yan hindi lang po kasi kasya sa isang page nung inedit ko sa canva huhu

- Lahat na po ng need na content, design, and pictures is nasa gdrive na po lahat :) Sana masunod po yung design as much as possible kasi yun na po yung napasa kong draft sa teacher ko 😞
- Font size and font color is up to you na po basta readable po yung text :)

**Yun lang po! Salamat po ulit! -vee**
